

ComEd Electricity Information

The ComEd service territory covers 11,411 square miles in Northern Illinois, stretching from the Wisconsin border to as far south as Pontiac, Ill., and from the Indiana border to the Mississippi River. It covers approximately 70 percent of the population in Illinois and the vast majority of the State's industrial companies. Our transmission and distribution systems are very robust, with more than 5,000 miles of overhead transmission lines and approximately 43,400 miles of overhead distribution lines and 42,300 miles of underground distribution lines. ComEd is committed to the safe and reliable delivery of electricity to our 3.7 million customers in the more than 400 communities, including the City of Chicago, that we serve across Northern Illinois. ComEd's peak system demand is just under 23,000 MW. ComEd is part of the Exelon Corporation (www.exeloncorp.com), headquartered in Chicago, which includes our sister-company, PECO Energy serving the Philadelphia, PA metropolitan area, Exelon Generation and other Exelon affiliate companies.

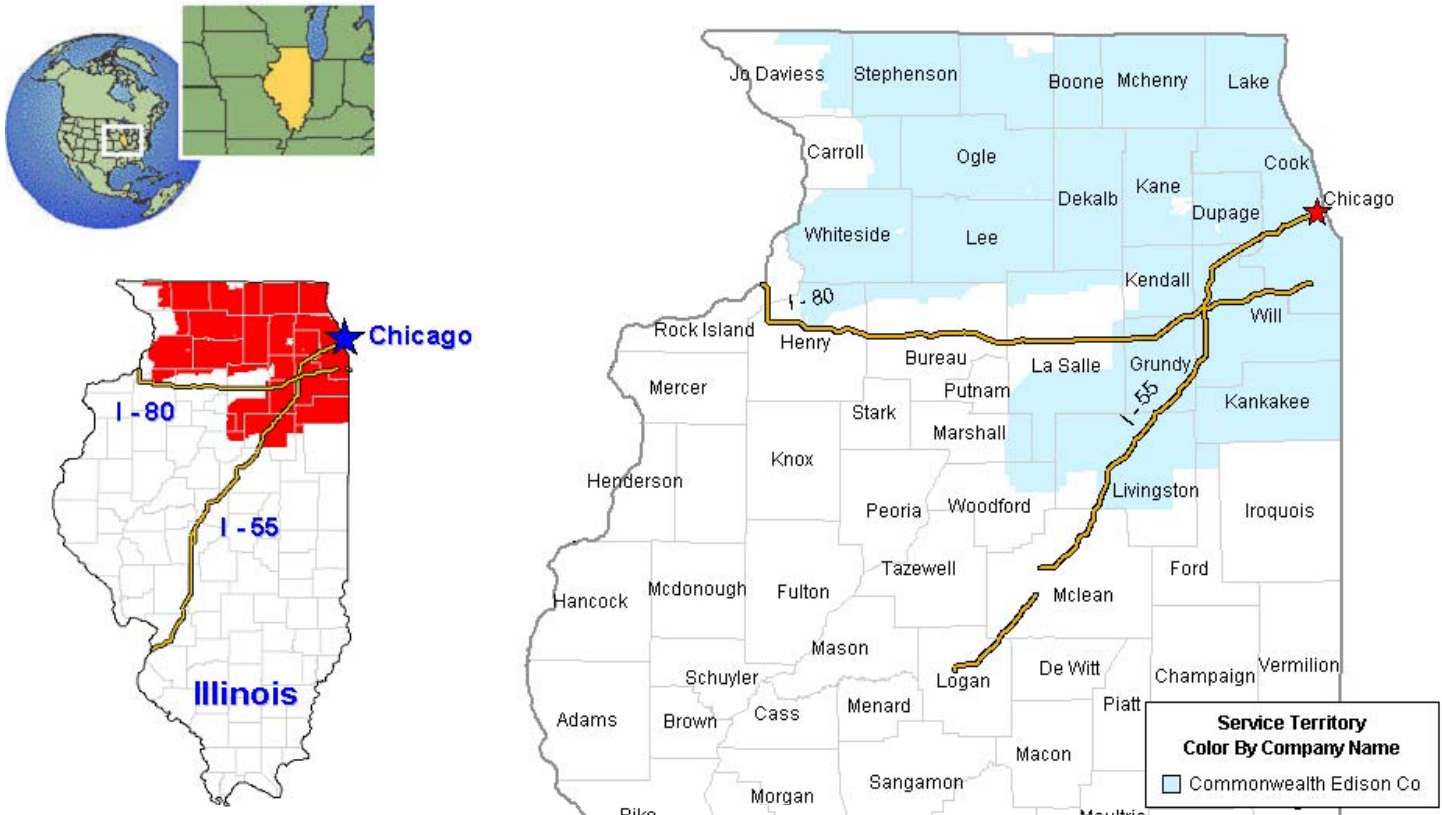

ComEd's ability to provide safe and reliable energy contributes to the quality of life in Northern Illinois and is a key component of overall economic development. Without a robust electrical system in place, Chicago and Northern Illinois would be unable to effectively compete for new business expansion in the global economy and existing businesses would be less competitive. Since 2000, ComEd has invested more than \$4.7 billion to expand, upgrade, and maintain our system as part of an ongoing commitment to improving system-wide reliability through a transmission and distribution infrastructure modernization and enhancement program to ensure the continued safe and reliable delivery of customer electricity. The benefits of the reliability improvement plan are evident as the average number of customer outages is down significantly (44% fewer outages) as are the length of customer outages (53% faster restoration times when outages do occur).

Since 2001, all businesses in Illinois have been able to select an electricity provider of their choice as part of legislation passed in 1997 that restructured the Illinois electric utility industry. Businesses have many competitive electricity supply options available to them which offers a tremendous advantage over neighboring Midwestern states that do not allow electricity choice. Over 75% of ComEd's business customer load is now taking advantage of the competitive market place by buying unbundled electricity from alternative suppliers. A list of certified alternative retail electricity suppliers is available at: www.ComEdPowerPath.com/res/res.asp and/or www.icc.illinois.gov. ComEd will continue to safely and reliably deliver electricity to end users regardless of whom they select as their energy supplier.

Customer choice has also had a huge impact on the electricity generation market. More than 8,800 MW's of new capacity from 24 different facilities (in addition to the region's existing 20,000 MW capacity) has been added in Northern Illinois since 1999. ComEd's former nuclear generating facilities in Illinois are now owned and operated by Exelon Generation. These zero emission facilities operate at some of the highest capacity factors in the industry at over 93%. ComEd's former fossil fuel generating facilities were sold to independent operators in the late 1990's.

ComEd joined the PJM Interconnection (www.pjm.com) in 2004 which further enhances reliability and offers more competitive supply options to Northern Illinois businesses. PJM is the largest independent regional transmission operator in the world. The PJM operating area stretches from the Mississippi River to the East coast and serves 51 million people. Businesses located within the PJM system have access to an installed generation capacity of 162,000 MW.

The ComEd Service Territory in Northern Illinois

Electricity Delivery Service Rates:

Customer Class	Rate (per kW)
< 100 kW	\$4.29
100 - 400 kW	\$5.01
400 - 1,000 kW	\$5.37
1,000 - 10,000 kW	\$5.22
> 10,000 kW	\$2.46
<i>High Voltage Service</i>	
< 10,000 kW	\$2.22
> 10,000 kW	\$1.09

Notes:

1. ComEd's Retail Delivery Service Rate for electricity distribution is a demand charge only rate set by the highest 30-minute kW demand.
2. Pricing for electricity supply is set by the 10+ competitive electricity suppliers certified by the Illinois Commerce Commission (list viewable at www.comedpowerpath.com/res/res.asp) or the price available from the Illinois Auction (www.Illinois-Auction.com) as a pass through to ComEd customers.
3. Above rates do not include ComEd customer service or metering charges or applicable State and local taxes and fees.
